

Javier Jimenez Molina

Murcia, Spain · [linkedin.com/in/javierjimenezmolina](https://www.linkedin.com/in/javierjimenezmolina) · +34 625213560 · jjime981@gmail.com · javierjimenez.dev

DevOps Engineer with more than four years of technical experience, specialising in infrastructure automation, container orchestration, and CI/CD pipeline optimisation. Advanced experience implementing Jenkins Shared Libraries (Groovy) and administering Kubernetes clusters. Strong full-stack software development background that supports scalable solutions and a better developer experience. Focused on observability with Grafana and Graylog, operational efficiency, and automation through APIs, AI agents, n8n workflows, webhooks, and integrations.

SKILLS (STACK)

- **CI/CD & Version Control:** Jenkins (Advanced, Shared Libraries, Pipelines as Code), GitLab CI, GitHub Actions, Bitbucket, Git.
- **Containerization & Orchestration:** Kubernetes (K8s), Docker, Helm, Rancher, Lens
- **Artifact Management:** JFrog Artifactory
- **Monitoring & Logging:** Grafana, Graylog, Prometheus
- **Development:** Java (Spring Boot), Node.js, TypeScript, React.
- **AI Integrations & Automation:** Helm agent, OpenClaw, LLMs, Harnes Engineering (context, cache, mcp, skills, etc)

PROFESSIONAL EXPERIENCE

Krimda

DevOps Engineer

Murcia, Spain

July 2025 · Present

- **Advanced CI/CD Engineering:** Designed and maintained modular Jenkins pipelines using Shared Libraries (Groovy), reducing code duplication and standardising deployment workflows across projects.
- **Artifact Management:** Implemented JFrog Artifactory for centralised binary and dependency management, integrating it with Bitbucket for a smooth development workflow.
- **Kubernetes Orchestration:** Administered and maintained Kubernetes clusters for highly available, scalable microservices. Developed scripting tools to audit per-service resource usage and optimise cluster capacity.
- **Observability and Monitoring:** Deployed Grafana dashboards and centralised logs with Graylog, improving incident response and real-time system visibility.
- **AI and Automation Integrations:** Worked with APIs, AI agents, n8n workflows, webhooks, and external integrations to automate operational and business processes.

Capgemini

Hybrid role evolving from software development into operations engineering and automation

Valencia, Spain

February 2021 · July 2025

- **Development:** Built backend microservices with Java Spring Boot and frontend applications with React.
- **Delivery Optimisation (Key Achievement):** Implemented CI/CD practices that reduced deployment times by over 80%, minimised manual errors, and accelerated time-to-market.
- **Automation:** Created continuous integration pipelines with Jenkins and GitHub Actions.
- **Infrastructure:** Managed Docker containers and orchestrated workloads with Kubernetes and Helm; supervised production environments using Rancher and Lens.
- **Full-Stack Development (React/Node.js):** Developed scalable SPAs and RESTful APIs, strengthening the understanding needed to design infrastructure around developer needs.
- **Cloud:** Deployed and managed resources on OVHcloud to support production availability.

FEATURED PERSONAL PROJECTS

Personal projects

- **MoneyFlow** - Personal finance application with web and React Native clients sharing logic in a monorepo, using Supabase and PostgreSQL as the backend. Technologies: React, React Native, TypeScript, Supabase, PostgreSQL, Gemini API.
- **Self-hosted Knowledge Platform** - Outline-based documentation platform with custom extensions, operated on Linux and container infrastructure. Technologies: Linux, Docker, PostgreSQL, Redis, CI/CD.
- **Print Studio** - Web extension integrated with the knowledge platform to format documents and prepare them for printing or export. Technologies: web development, Docker, CI/CD.
- **Hermes Agent** - Personal environment for working with AI agents, persistent profiles, skills, task memory, and tool integrations. Technologies: LLMs, MCP, APIs, automation.
- **Personal Portfolio** - Bilingual portfolio built with Astro, React, and TypeScript, with interactive components and internationalisation. Technologies: Astro, React, TypeScript, Tailwind CSS, i18n.
- **Services Site** - Bilingual technology-services landing page focused on reusable structure, internationalisation, and SEO fundamentals. Technologies: Astro, TypeScript, CSS, i18n, SEO.

EDUCATION

Telematics Engineering - Polytechnic University of Cartagena
Information Technologies and Telecommunications

Cartagena, Murcia, Spain
July 2021
